a) Balustrade – a functional and decorative architectural assembly used to provide safety on stairs, balconies, and terraces.
b) Concrete medallions - is a decorative, usually circular or oval, precast or stamped concrete element use to enhance facades, ceilings, floors or landscape features.
c) Dentil molding – a decorative trim featuring a repeating row of small, evenly spaced rectangular blocks that resemble teeth, usually along rooflines and cornices.
d) Doric column – the oldest, simplest, and most robust of the three classical Greek architectural orders. Doric has sturdy fluted shafts, a plain, capital (top), and no base.
e) Dormer - a vertical structural element with its own roof and window that projects from a sloped roofline.
f) Eyebrow window – a low, wide, and curved window or dormer that peeks out from the slope of a roof. It has no vertical sides.

g) Finial – a decorative, often pointed, ornament that tops the highest point of a gable, roof, or spire.
h) Palladian window – a three-part window composed of a large arched central section flanked by two narrower, shorter sections with flat tops.
i) Porte cochere – a covered entranceway to a house or other building, originally designed as roofed areas large enough for carriages or other wheeled vehicles so passengers could enter or leave protected from the weather.
j) Oculus – a circular opening in the center of a dome or in a wall.
k) Quoins - are masonry blocks that form the outside corners of a building's walls.
